Six delivery charts and what they are telling you.

How to read each one in ten seconds, and the warning sign to act on.

01 Sprint burndown

02 Release burnup

03 Cumulative flow

04 Cycle time scatter

05 Throughput and say-do ratio

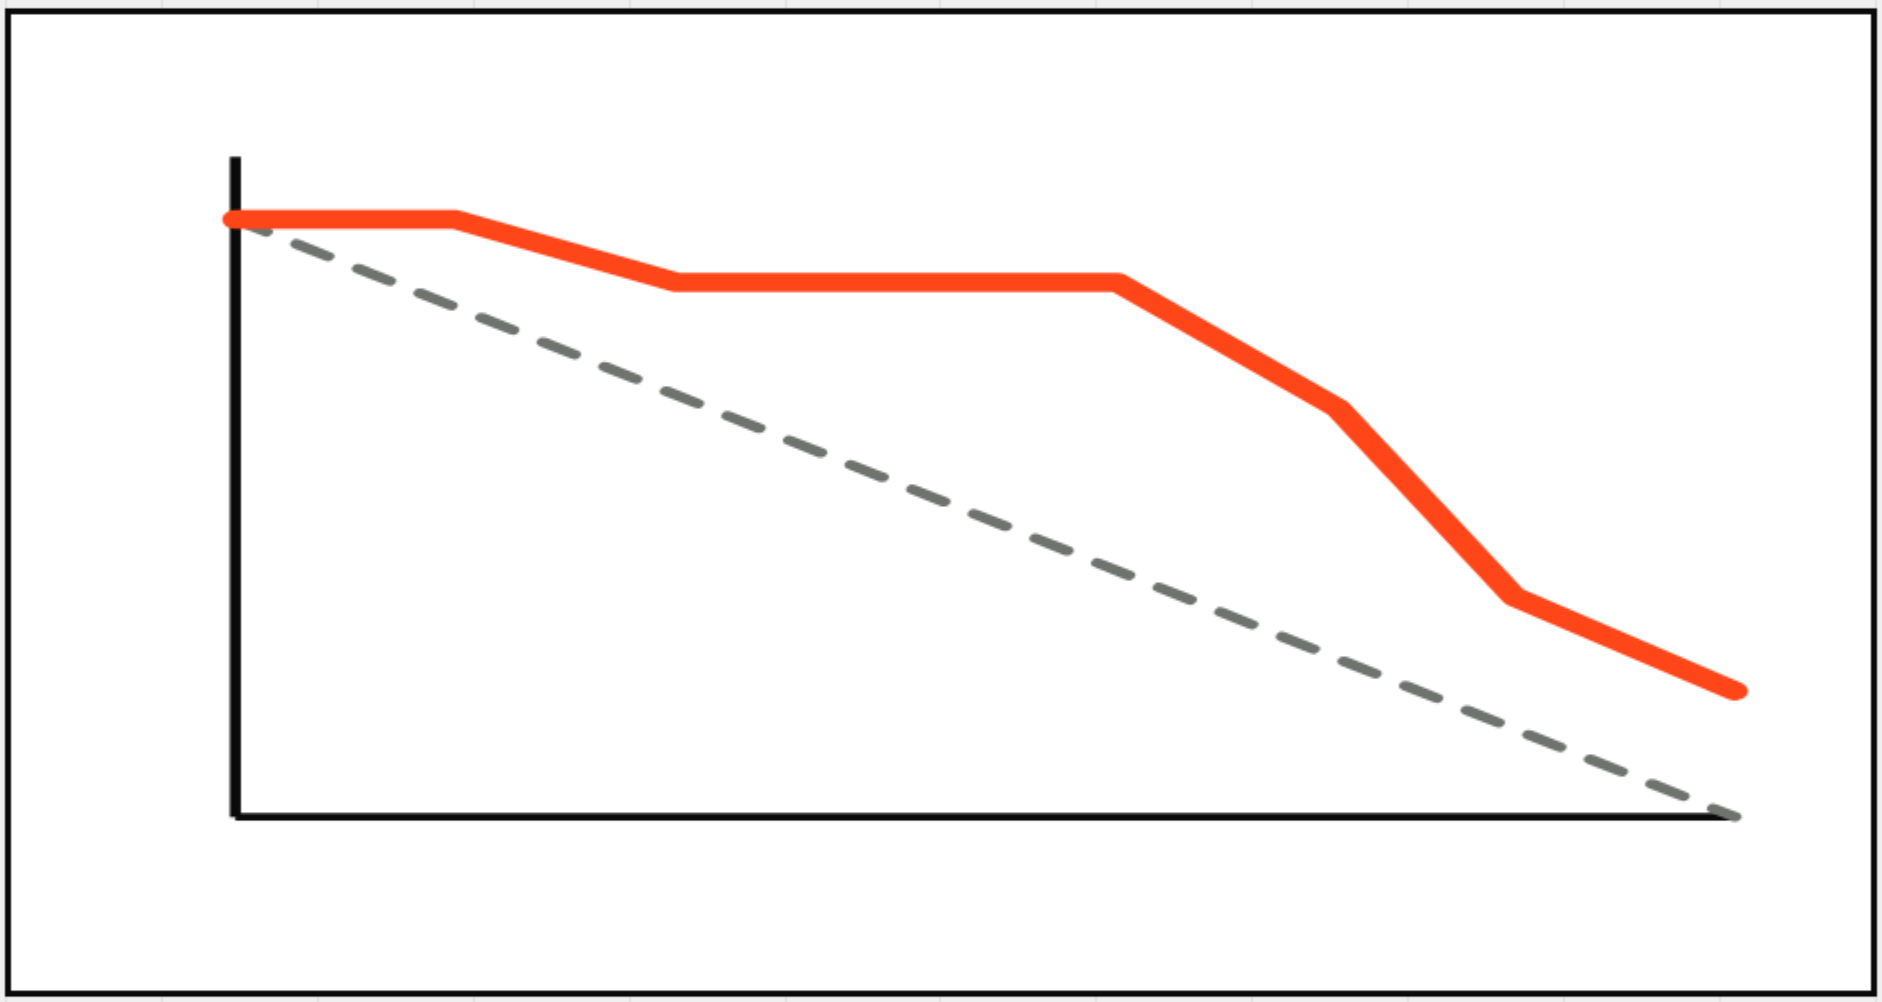

Swipe to start

CHART 1 OF 6

01

Sprint burndown

Work left in the sprint, day by day, against an ideal line.

WARNING SIGN

Flat for days, then a cliff at the end. Work is not being finished in small pieces.

HEALTHY LOOKS LIKE

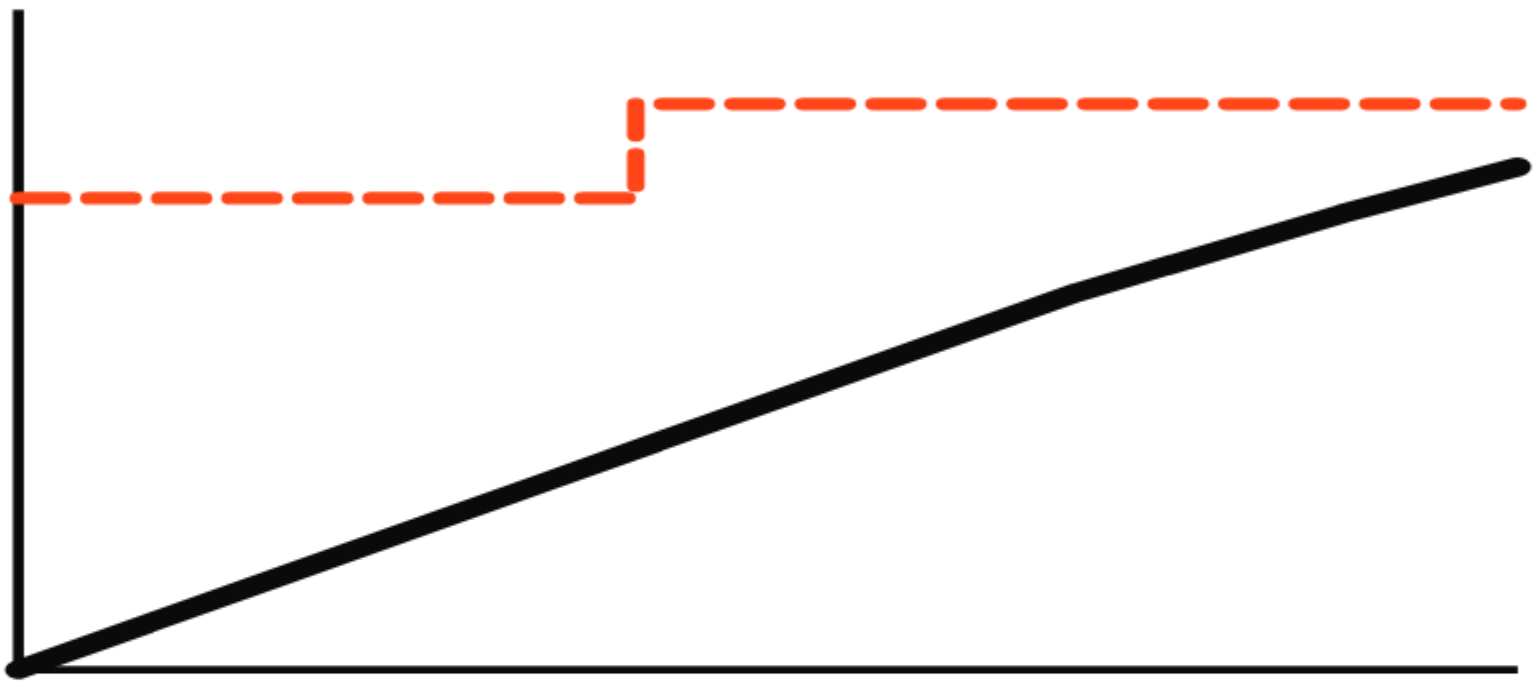

Steady steps down. Flat days have a known reason.

CHART 2 OF 6

Release burnup

02

Work done climbing toward the total scope line.

WARNING SIGN

The scope line keeps rising. That is scope creep, and the date is moving even if nobody said so.

HEALTHY LOOKS LIKE

The gap between done and scope narrows every sprint.

CHART 3 OF 6

Cumulative flow 03

Items in each stage over time: to do, in progress, done.

WARNING SIGN

A middle band getting wider. Work is piling up in one stage. That stage is your bottleneck.

HEALTHY LOOKS LIKE

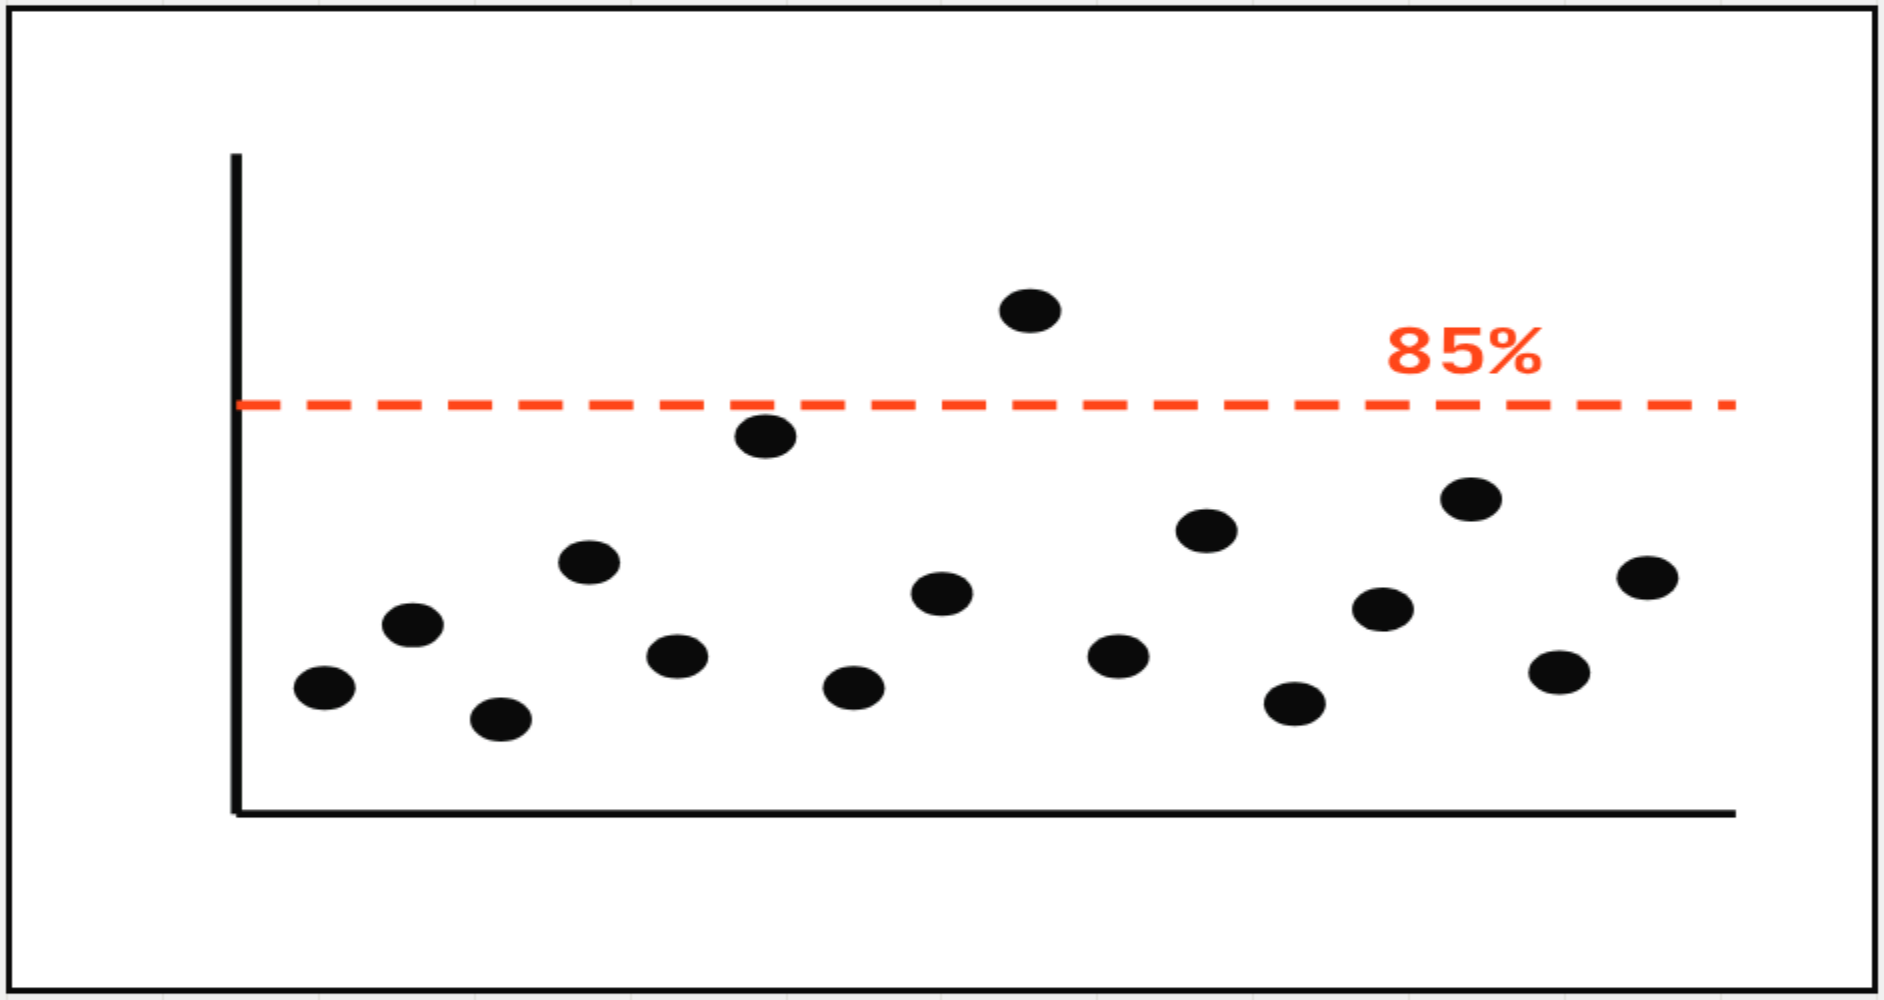

Bands stay roughly parallel and done keeps rising.

CHART 4 OF 6

Cycle time scatter

04

How long each finished item took, from start to done.

WARNING SIGN

Dots far above the line. Find out what those items had in common.

HEALTHY LOOKS LIKE

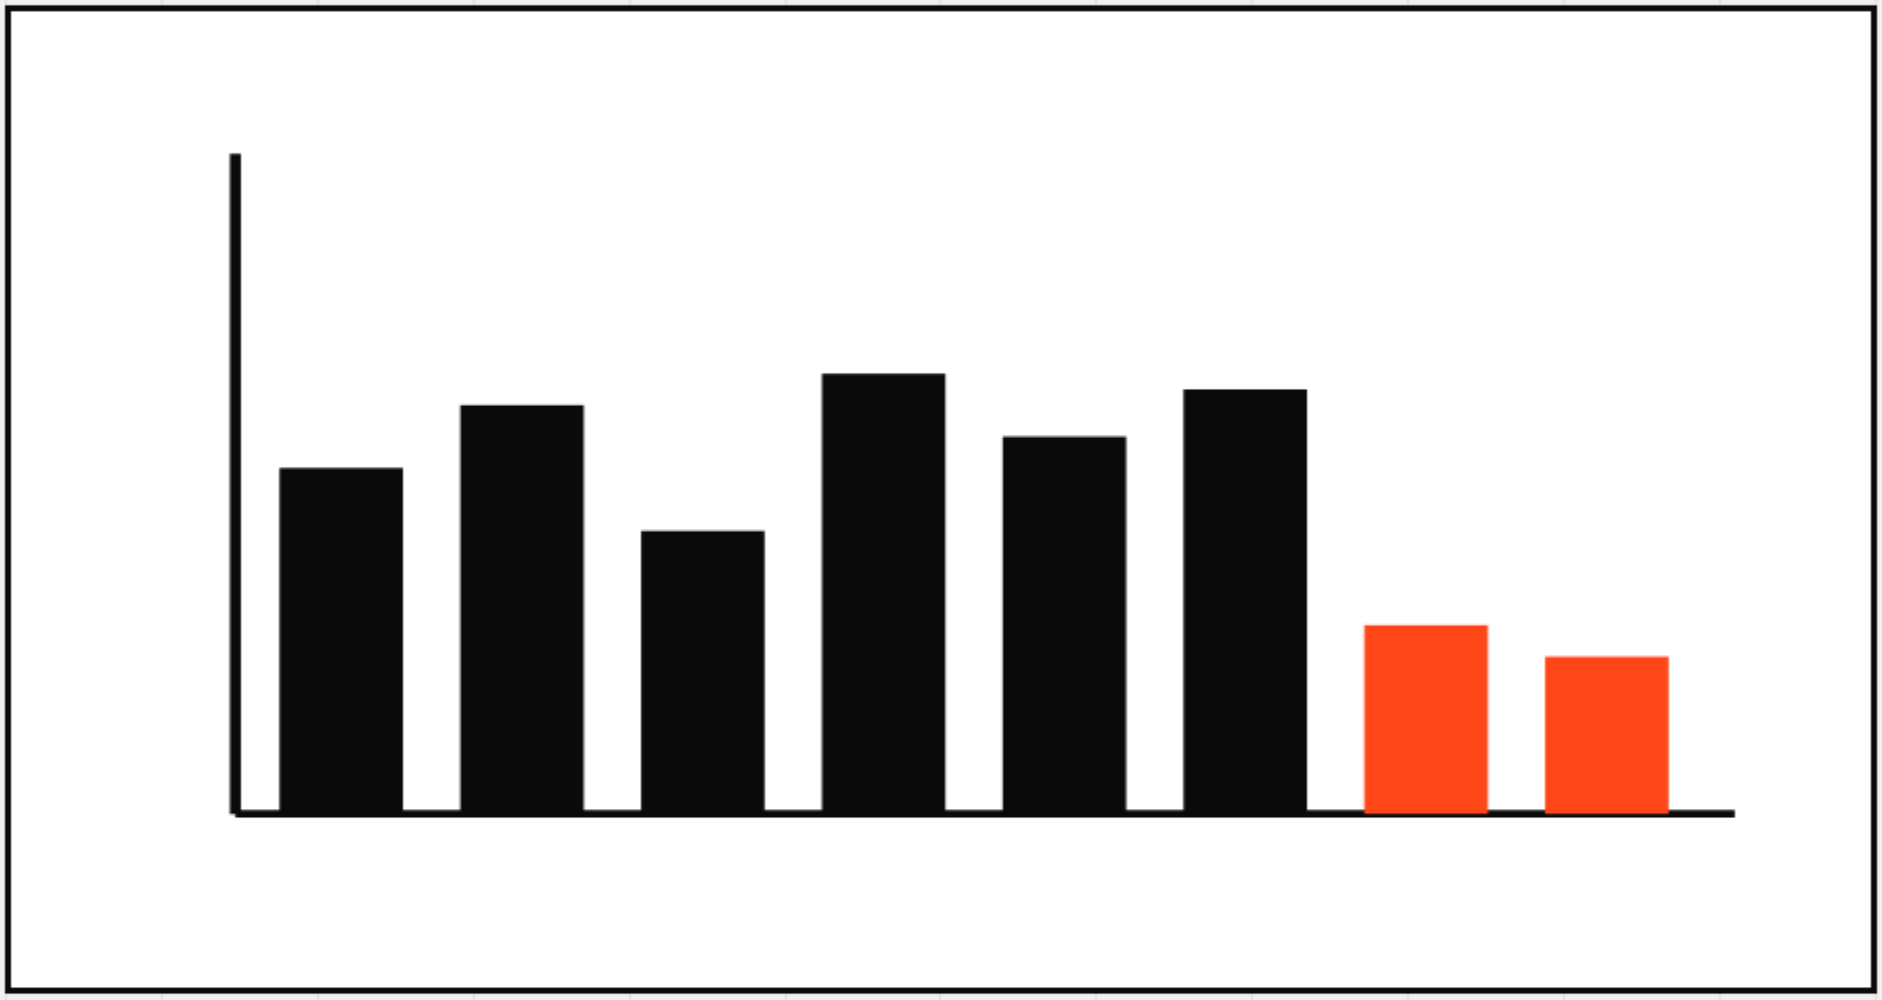

Use the 85% line to forecast: "85% of items finish within N days."

CHART 5 OF 6

Throughput

05

Items finished per week or per sprint.

WARNING SIGN

A sudden drop, like the last two bars. Check for blockers, leave or hidden work.

HEALTHY LOOKS LIKE

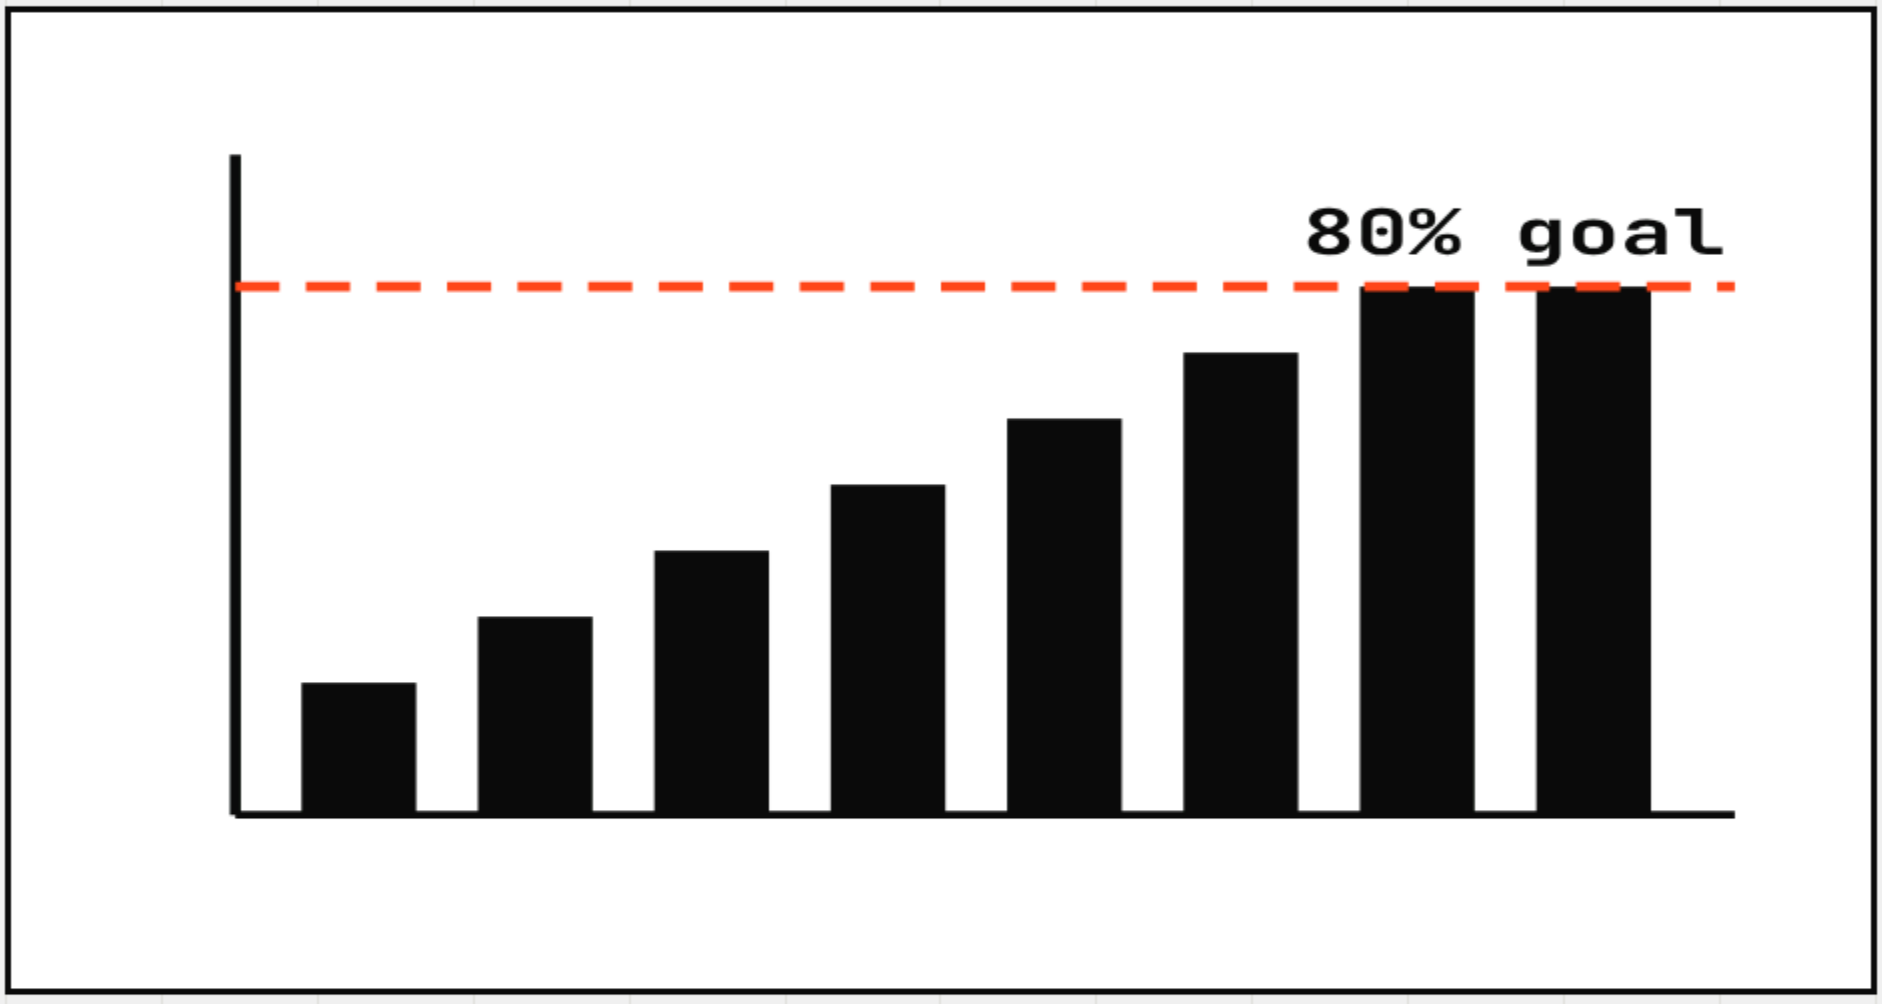

A stable range you can plan with. Forecast from the range, not the best week.

CHART 6 OF 6

Say-do ratio

06

Committed items finished ÷ committed items, per sprint.

WARNING SIGN

Under 60% for several sprints. The plan is not credible, so trust erodes.

HEALTHY LOOKS LIKE

Climbing toward 80% or higher. Leaders can plan around what you say.

CHEAT SHEET

Which chart answers which question?

QUESTION	READ THIS CHART
Will we hit the sprint goal?	Burndown
When will the release land?	Burnup
Where is work getting stuck?	Cumulative flow
How long will this item take?	Cycle time scatter
How much can we take on?	Throughput
Can leaders trust our plan?	Say-do ratio

YOUR TURN

Which chart does your team review every sprint?

If the answer is none, start with burnup and say-do. They tell leadership the most with the least explanation.

01 **Save it**

so it is there at your next planning session.

02 **Send it**

to the delivery manager or Scrum Master who needs it.

03 **Follow**

for the next field guide in the series.
